## LOYOLA COLLEGE (AUTONOMOUS), CHENNAI – 600 034

**M.Sc.** DEGREE EXAMINATION – **CHEMISTRY** 

FIRST SEMESTER – **NOVEMBER 2022** 

## PCH1MC03 – QUANTUM CHEMISTRY AND GROUP THEORY

Date: 28-11-2022

Dept. No.

Max. : 100 Marks

Time: 01:00 PM - 04:00 PM

|    | SECTION A   |                    |      |  |  |  |  |  |  |  |
|----|---|--------------------|------|--|--|--|--|--|--|--|
|    | Answer ALL the questions  |                    |      |  |  |  |  |  |  |  |
| 1  | Answer the following  |                    |      |  |  |  |  |  |  |  |
| a) | Mention the limits and Laplacian for spherical coordinates.   | K1                 | CO1  |  |  |  |  |  |  |  |
| b) | How many degenerate energy levels lie in $11h^2/8mL^2$ for a particle in a cubic box of length L?   | K1                 | CO1  |  |  |  |  |  |  |  |
| c) | Write the Hamiltonian for $H_2^+$ ion.  |                    |      |  |  |  |  |  |  |  |
| d) | Identify the number of reflection planes present in a molecule of $C_{4v}$ point group.   | K1                 | CO1  |  |  |  |  |  |  |  |
| e) | Mention the operator involved in resonance integral.  | K1 CO1             |      |  |  |  |  |  |  |  |
| 2  | Answer the following  | $(5 \times 1 = 5)$ |      |  |  |  |  |  |  |  |
| a) | Find the accelerating potential for an electron with de Broglie wavelength of 5 Å.  | K2                 | CO1  |  |  |  |  |  |  |  |
| b) | Predict the value of $H_0(q)$ .   | K2                 | CO1  |  |  |  |  |  |  |  |
| c) | Write the Slater determinant for the ground state configuration $1s^2$ .  | K2                 | CO1  |  |  |  |  |  |  |  |
| d) | What is the point group of BFCl <sub>2</sub> molecule?  | K2                 | CO1  |  |  |  |  |  |  |  |
| e) | Mention the significance of coulomb integral.   | K2                 | CO1  |  |  |  |  |  |  |  |
|    | SECTION B   |                    |      |  |  |  |  |  |  |  |
|    | Answer any THREE of the following<br>30)  |                    |      |  |  |  |  |  |  |  |
| 3  | (a) State and explain the postulates of quantum mechanics.  | W2                 | 0.02 |  |  |  |  |  |  |  |
|    | (b) Which of the following operators are linear? () <sup>2</sup> and $d^2/dx^2$ . Justify. (5+5)  | K3                 | CO2  |  |  |  |  |  |  |  |
| 4  | Write the Schrödinger wave equation for rigid rotator in terms of spherical angular coordinates. Using the method of separation, separate them into two independent variables such as $P(\theta)$ and $Z(\Phi)$ and obtain the solution for $\Phi$ equation.  |                    |      |  |  |  |  |  |  |  |
| 5  | <ul> <li>(a) For a particle in an infinitely deep one-dimensional potential box of length L, apply the trial wave function ψ = Nx(L<sup>2</sup>-x<sup>2</sup>) to calculate the energy and obtain the percentage of error.</li> <li>(b) State the Pauli's exclusion principle for ground state electronic configuration of lithium atom. (6+4)</li> </ul>   |                    |      |  |  |  |  |  |  |  |
| 6  | <ul> <li>a) List the symmetry elements and operations of cyclopropane molecule.</li> <li>b) Obtain the matrix representation for the refelection operation σ<sub>yz</sub>. (5+5)</li> </ul>   |                    |      |  |  |  |  |  |  |  |
| 7  | <ul> <li>a) Obtain the reducible representation relating to the prediction of hybridisation scheme in CH<sub>3</sub>Cl molecule.</li> <li>b) Evaluate the overlap integral S<sub>12</sub> in the formation of H<sub>2</sub><sup>+</sup> ion when the distance of separation between the nuclei of two 1S orbitals is 1.32 Å. Given the first Bohr radius 0.529 Å. (5+5)</li> </ul>                            | K3                 | CO2  |  |  |  |  |  |  |  |
|    | SECTION C   |                    |      |  |  |  |  |  |  |  |
|    | Answer any TWO of the following $(2 \times 12.5 = 25)$  |                    |      |  |  |  |  |  |  |  |
| 8  | <ul> <li>(a) Write the conditions for acceptable wave functions. Identify the acceptable wave functions among the following and justify: (i) x<sup>4</sup> (ii) tan θ.</li> <li>(b) Show that ψ = sin(5x) sin(8y) sin(2z) is an eigen function of ∇<sup>2</sup> and find the eigen value?</li> <li>(c) Predict the value of [x, p<sub>x</sub><sup>2</sup>] and mention its significance. (4.5+4+4)</li> </ul> | K4                 | CO3  |  |  |  |  |  |  |  |

| Å.<br>(b) Write the Hamiltonian and Schrödinger wave equation for hydrogen like atom   |  |  |  |  |  |  |  |  |  |
|--|--|--|--|--|--|--|--|--|--|
| 10(a) Explain Born-Oppenheimer approximation and write Kohn-Sham equation.(b) Using the concept of Great Orthogonality theorem and construct D2h character   |  |  |  |  |  |  |  |  |  |
| <ul> <li>(a) What is variation integral? How is it used to determine the energies associated with the trial function ψ = c<sub>1</sub>ψ<sub>1a</sub> + c<sub>2</sub>ψ<sub>1b</sub> in the formation of H<sub>2</sub><sup>+</sup> ion?</li> <li>(b) Explain the evaluation of the average energy integrals H<sub>aa</sub> and H<sub>ab</sub>. (6.5+6)</li> </ul>  |  |  |  |  |  |  |  |  |  |
| SECTION D  |  |  |  |  |  |  |  |  |  |
| Answer any ONE of the following(1 x 15 = 15)   |  |  |  |  |  |  |  |  |  |
| <ul> <li>(a) Derive time dependent Schrödinger wave equation.</li> <li>(b) With the help of perturbation theorem, predict the ground state energy of helium atom.</li> <li>(c) Obtain the value of L<sub>1</sub>(ρ) and P<sub>1</sub>(x).</li> <li>(6+5+4)</li> </ul>  | K5   | CO4  |  |  |  |  |  |  |  |
| (a) Write the requirement of Hartree-Fock self-consistent field method.<br>(b) Identify the symmetries of IR and Raman vibrational modes of trans-2-butene<br>using the C <sub>2h</sub> character table provided. Verify whether this molecule obeys<br>mutual exclusion principle and mention the significance of the Mulliken symbols<br>of<br>(3+12)<br>$C_{2h} \stackrel{E}{=} C_2 \stackrel{i}{=} \frac{\sigma_h}{\sigma_h}$ modes.<br>$A_g \stackrel{1}{=} 1 \stackrel{1}{=} 1 \stackrel{1}{=} \frac{r_{z_z}}{r_{z_z}} \stackrel{x^2, y^2, z^2, xy}{xz, yz}$ | К5   | CO4  |  |  |  |  |  |  |  |
| SECTION E  | 1  |  |  |  |  |  |  |  |  |
| nswer any ONE of the following (1  | x 20 =   | = 20)  |  |  |  |  |  |  |  |
| <ul> <li>(a) Derive the expressions for wave function and energy for a particle in 1-D box of length l.</li> <li>(b) Obtain the Hamiltonian for simple harmonic oscillator. Prove that the operator p<sub>x</sub> = (h/2πi) d/dx is Hermitian.</li> <li>(8)</li> <li>(c) The wavenumber of the fundamental vibrational transition of <sup>35</sup>Cl<sub>2</sub> is 564.9 cm<sup>-1</sup>. Calculate the force constant of the bond (mass of <sup>35</sup>Cl = 34.9688 u).</li> <li>(6)</li> </ul>   | K6   | CO5  |  |  |  |  |  |  |  |
|  | having 10 double bonds (+ 9 single bonds) and a transition wave length of 4300 Å.<br>(b) Write the Hamiltonian and Schrödinger wave equation for hydrogen like atom.<br>Draw the radial plots for n = 3 and 1 = 1.<br>(5+7.5)<br>(a) Explain Born-Oppenheimer approximation and write Kohn-Sham equation.<br>(b) Using the concept of Great Orthogonality theorem and construct D <sub>2h</sub> character<br>table. (5+7.5)<br>(a) What is variation integral? How is it used to determine the energies associated<br>with the trial function $\psi = c_1\psi_{1a} + c_2\psi_{1b}$ in the formation of H <sub>2</sub> <sup>+</sup> ion?<br>(b) Explain the evaluation of the average energy integrals H <sub>an</sub> and H <sub>ab</sub> . (6.5+6)<br>SECTION D<br>newer any ONE of the following (1<br>(a) Derive time dependent Schrödinger wave equation.<br>(b) With the help of perturbation theorem, predict the ground state energy of helium<br>atom.<br>(c) Obtain the value of $L_1(\rho)$ and $P_1(x)$ .<br>(6+5+4)<br>(a) Write the requirement of Hartree-Fock self-consistent field method.<br>(b) Identify the symmetries of IR and Raman vibrational modes of trans-2-butene<br>using the C <sub>2n</sub> character table provided. Verify whether this molecule obeys<br>mutual exclusion principle and mention the significance of the Mulliken symbols<br>of C <sub>2h</sub> $\frac{E}{Ag}$ 1 1 1 1 $\frac{1}{1}$ $\frac{R_x}{R_y}$ $\frac{x^2}{x^2}$ , $\frac{x^2}{xy}$ $\frac{x^2}{A_y}$<br>$\frac{A_u}{1}$ 1 1 -1 1 $\frac{1}{x}$ , $\frac{x^2}{B_u}$ $\frac{y^2}{x^2}$ , $\frac{x^2}{xy}$<br>$\frac{A_u}{A_u}$ 1 1 -1 1 $\frac{1}{x}$ , $\frac{x^2}{B_u}$ $\frac{y^2}{x^2}$ , $\frac{x^2}{xy}$<br>$\frac{A_u}{A_u}$ 1 1 $\frac{1}{1}$ $\frac{1}{x}$ $\frac{x^2}{x^2}$ $\frac{x^2}{x^2}$ , $\frac{x^2}{xy}$<br>$\frac{A_u}{B_u}$ 1 $\frac{1}{1}$ $\frac{1}{x}$ $\frac{1}{x}$ $\frac{x^2}{x^2}$ $\frac{x^2}{x^2}$ $\frac{x^2}{x^2}$ $\frac{x^2}{x^2}$<br>$\frac{x^2}{x^2}$ $\frac{x^2}{x^2}$ | having 10 double bonds (+ 9 single bonds) and a transition wave length of 4300 Å.<br>(b) Write the Hamiltonian and Schrödinger wave equation for hydrogen like atom.<br>Draw the radial plots for n = 3 and 1 = 1.<br>(5+7.5)<br>(a) Explain Born-Oppenheimer approximation and write Kohn-Sham equation.<br>(b) Using the concept of Great Orthogonality theorem and construct D <sub>2h</sub> character table.<br>(5+7.5)<br>(a) What is variation integral? How is it used to determine the energies associated with the trial function $\psi = c_1\psi_{1a} + c_2\psi_{1b}$ in the formation of $H_2^+$ ion?<br>(b) Explain the evaluation of the average energy integrals $H_{au}$ and $H_{ab}$ .<br>(6.5+6)<br><b>SECTION D</b><br><b>nswer any ONE of the following</b><br>(1 x 15:<br>(a) Derive time dependent Schrödinger wave equation.<br>(b) With the help of perturbation theorem, predict the ground state energy of helium atom.<br>(c) Obtain the value of $L_1(\rho)$ and $P_1(x)$ .<br>(d) Write the requirement of Hartree-Fock self-consistent field method.<br>(b) Identify the symmetries of IR and Raman vibrational modes of trans-2-butene using the $C_{2h}$ character table provided. Verify whether this molecule obeys mutual exclusion principle and mention the significance of the Mulliken symbols of $\frac{C_{2h}}{A_g}$ 1 1 1 1 $\frac{1}{1}$ $\frac{R_2}{R_g}$ $R_2$ |  |  |  |  |  |  |  |

| b | <ul> <li>a) Apply variation theorem to predict the ground state energy of hydrogen atom using the trial wave function, ψ = e<sup>-αr</sup>.</li> <li>b) Using Huckel molecular orbital theory, solve the secular determinants for ethylene and allyl radical. Calculate the total π-electron energy and the stabilisation energy.</li> <li>c) Discuss the application of direct product principle to verify whether the π → π* transition is allowed in HCHO molecule. The C<sub>2v</sub> character table is given for reference. (5+8+7)</li> </ul> |  |  |  |  |                                |  |  |  | CO5 |
