About the Webinar

Utilization of plastic for food packaging has been increasing in recent days, causing serious health and environmental problems, on the other hand, the concept of recycling the packaging materials is complex and an expensive task. Many states including the Tamil Nadu government banned 14 types of one-time use and throw away plastic items on January 1, 2019, and reinforced the action under the 'People's Campaign Against Throw Away Plastics' on September 3, 2021. Hence, in the recent years, cost-effective renewable raw materials have been deeply explored aiming at minimizing pollution through alternative biodegradable packaging materials, enhancing the shelf-life of minimally processed food products. Herein, the goal of this webinar is to provide an overview of the current state-of-the-art use of edible coatings and composite films; paying attention to enthuse innovation through research in its development, characterization, functionality and application in food industry.

Who should attend?

Interested Students, Research Scholars, Faculty from colleges, Executives from the Industry desirous to improving skill set in packaging.

E-Certificate will be provided for registered participants.
