INSECT QUIZ  
5<sup>TH</sup> MARCH, 2020

Q.8

On a September morning in 1928, a scientist returned to his work bench at the St. Mary's hospital, after vacation.

He noticed that a few of his dishes that contained the bacteria *Staphylococcus aureus* had developed a mould and this mould was killing the bacteria. A type of this mould is now preserved at a science museum, and after many years, was synthesised in mass quantities, saving many lives in WW2.

Who was the scientist who first noticed it and what had he discovered?

INSECT QUIZ  
5<sup>TH</sup> MARCH, 2020

### 5. Give me X

Harold Matson and Elliot Handler founded the company X in 1946. The company sold picture frames, and later dollhouse furniture. Matson sold his share to Handler due to poor health, and Handler's wife Ruth took Matson's role. In 1947, the company had its first hit, a ukulele called "Uke-A-Doodle".

It is the second biggest company in terms of revenue in its particular field.
