

**Report on  
Special Lecture on “Right to Life”**

**Prolife Forum (Shift-II)**

The Prolife club Shift-II had organised a lecture about “Right to life” on 5<sup>th</sup> December 2018. The prolife Shift-II plays a key role in the development of personality of students by giving them positivity in life.

The club organises many lectures and interactive sessions which would help in enhancing the personality of the students. The club comes up with diverse topics that are important to be addressed. The topic taken up this time was Right to life. A very essential matter that has to be addressed. The lecture was delivered by Dr. Bernard Sami.

The lecture was very inspiring as he spoke about how important it was to deal with the challenges of life and live without giving up on life. He stressed that the younger generation has to be strong and think about the pros of living a happy life rather than thinking about its cons. He told that suicide was not the only solution for the problems in life.

In his speech he informed the students about article 21 of the constitution which talked about the protection of life and personal liberty. It stated, "No person shall be deprived of his life or personal liberty except according to procedure established by law". He spoke about the importance of education and the major role it plays in shaping a person's life.

His speech was very inspiring and forced people to engage themselves in productive work which would lead them to a happy and prosperous life. The programme ended on a happy note which illuminated the minds and hearts of the students.
