## LOYOLA COLLEGE (AUTONOMOUS) CHENNAI – 600 034

## M.Sc. DEGREE EXAMINATION - CHEMISTRY

## PCH3ME01 - APPLIED ORGANIC CHEMISTRY

	te: 07-05-2025 Dept. No. Max. : 100 Marks			
Time: 09:00 AM - 12:00 PM				
SECTION A – K1 (CO1)				
	Answer ALL the questions $(5 \times 1 = 5)$			
1	MCQ			
a)	Starch suspension is an example of fluid flow.  (i) pseudoplastic (ii) dilatant (iii) rheopectic (iv) Newtonian			
b)	(i) pseudoplastic (ii) dilatant (iii) rheopectic (iv) Newtonian  Which among the following reagent is used in the Simon-Smith reaction?			
(U)	(i) ICH <sub>2</sub> ZnI (ii) (CH <sub>3</sub> ) <sub>2</sub> CuLi (iii) SmI <sub>2</sub> (iv) mCPBA			
c)	Which of the following is a Moffatt oxidation reagent?			
	(i) Poly-N-bromo succinimide (ii) Polystyrene thiomethyl lithium			
	(iii) DMSO and Dicyclohexyl carbodiimde (iv) None of these			
d)	The percentage of atom economy of the following reaction is			
	OH OH			
	(') 25 0/			
	(i) 25 % (ii) 50 % (iii) 75 % (iv) 100 %			
e)	The reagent/s used for the following ultrasonic assisted organic synthesis is/are			
	II			
	I O Me ? US, RT			
	US, RI			
	(i) N-Methylpropylidone/Pd-C (ii) PdCl <sub>2</sub> /TEA (iii) CH <sub>2</sub> I <sub>2</sub> /Zn/THF (iv) CHCl <sub>3</sub> /NaOH			
SECTION A – K2 (CO1)				
Answer ALL the questions $(5 \times 1 = 5)$				
2 True or False				
a)	Reynold's number is used in the fluid flow dynamics.			
b)	Cyclohexenone on reaction with Gilman's reagent forms 1,4-additon product.			
c)	Poly styrene is the most abundantly used polymer support in organic synthesis.			
<u>d)</u>	Ionic liquids are made up of heterocyclic cations and large sized polyatomic anions.			
e)	The frequency range for microwave radiation used for organic synthesis is 300 GHz to 3 KHz.  SECTION B – K3 (CO2)			
	Answer any THREE of the following $(3 \times 10 = 30)$			
3	(a) What is Reynolds's number? How are the types of flow observed in Reynolds's experiment?			
A	(b) What is boiling point diagram and mention its significance in the distillation processes? $(6+4)$			
4	Explain the following reactions with suitable examples:  (i) McMurray olefination  (ii) Acyl anion reaction  (5 + 5)			
5	Organize the requirements to be a best polymer support for an organic synthesis highlighting the			
	properties and advantages.			
6	Illustrate the significance of ionic liquid as solvent in organic synthesis with examples.			
7	Explain any five ultrasonic assisted organic synthesis.			

SECTION C – K4 (CO3)			
	Answer any TWO of the following (2	x 12.5 = 25	
8	<ul><li>(a) What are the types of flow in fluid dynamics and give an example for each.</li><li>(b) Draw a complete set of continuous fractionating column with rectifying and stripping</li></ul>		
9	<ul><li>(a) Give any two synthetic applications each of organocadmium and organocopper.</li><li>(b) Give the mechanism of the following conversion.</li></ul>	(4+4) $(4.5)$	
	$ \begin{array}{c c} I & \text{(i) SmI}_2 \\ \hline \text{(ii) } C_6H_5COCH_3 \end{array} $		
10	<ul><li>(a) List the twelve principles of green chemistry.</li><li>(b) Outline the synthetic applications of levulinic acid obtained from the waste biomass.</li></ul>	(6) (6.5)	
11	(a) Explain the advantages of the following microwave assisted organic synthesis.  (i) Ritter reaction  (ii) Suzuki reaction	(6.5) $(3+3)$	
	(b) Explain the microwave assisted C- & N-alkylation and condensation of active methyler	ne compounds (6.5)	
SECTION D – K5 (CO4)			
	Answer any ONE of the following	$(1 \times 15 = 15)$	
12	<ul> <li>(a) Explain the processes involved in the industrial production of aspirin.</li> <li>(b) Explain the following with suitable examples.</li> <li>(i) olefin metathesis (ii) ketyl-alkene coupling reactions</li> </ul>	(8) (4+3)	
13	(a) Compare the salient features of conventional heating and microwave heating. (b) Write any four organic reactions that are carried out in an aqueous medium.	(7) (8)	
SECTION E – K6 (CO5)			
Answer any ONE of the following $(1 \times 20 = 20)$			
14	<ul> <li>(a) What are the challenges of pilot plant scale up processes?</li> <li>(b) Predict the product for the reaction of the following substrate with CH<sub>3</sub>MgBr addition hydrolysis.</li> <li>(i) HC(OC<sub>2</sub>H<sub>5</sub>)<sub>3</sub> (ii) HCONR<sub>2</sub> (iii) CH<sub>3</sub>Br (iv) H<sup>+</sup></li> </ul>	$(4)$ 1 followed by $(4 \times 4)$	
15	<ul> <li>(a) How would you convert 1-chloro octane into 1-cyano octane? Explain the salient feat reaction with mechanism.</li> <li>(b) Predict the product and outline the best method to carry out the following reactions.</li> </ul>	,	
	(i) $\xrightarrow{\text{PNBS}}$ ? (ii) $\xrightarrow{\text{CH}_2\text{OH}}$ $\xrightarrow{\text{PSCDI}}$ ?		
	$(iii) \xrightarrow{\text{Me}} \xrightarrow{\text{Me}} \xrightarrow{\text{Me}} ?(iv) \leftarrow \text{CH}_2\text{Cl} \xrightarrow{\text{P} \land \land \land} ?$
