## M.C.A.DEGREE EXAMINATION - COMPUTER APPLICATIONS

FOURTHSEMESTER-APRIL 2017

## CA 4808- RESOURCE MANAGEMENT TECHNIQUES

Date: 20-04-2017
Time: 09:00-12:00

Dept. No.

SET 1 PARTA
Answer ALL Questions

1. What are slack and surplus variables?
2. In simplex method, what is the condition that al.p.p has unbounded solution?
3. Give the steps of RowMinima method for initial allocation in Transportation Problem.
4. State True or False the following.
i. In Transportation Problem, initial allocation is unique.
ii. In Assignment Problem, no. of rows and no. of columns need not be equal.
5. What do you mean by decision-making under conditions of risk?
6. What is two-personzero-sum game?
7. Define the following. i. Event ii. Activity.
8. Distinguish between PERT and CPM
9. What is queue discipline?
10. In a bank, customers arrive every 15 minutes and they are served every 3 minutes. What is clerk's idle time and busy time?

## PARTB

Answer ALLQuestions
11a. Solve graphically the following i.p.p.
Maximize $\mathrm{Z}=-5 \mathrm{x}_{1}+3 \mathrm{x}_{2}$
Subject to $2 \mathrm{x}_{1}+4 \mathrm{x}_{2} \leq 16$

$$
\begin{gathered}
3 x_{1}+x_{2} \geq 3 \\
-7 x_{1}+5 x_{2} \leq 35 \\
x_{1}, x_{2} \geq 0
\end{gathered}
$$

(or)
11 b Solve graphically the following 1.p.p
Minimize $\mathrm{z}=4 \mathrm{x}_{1}-3 \mathrm{x}_{2}$
Subject to $5 x_{1}+3 x_{2} \leq 30$
$3 \mathrm{x}_{1}-\mathrm{x}_{2} \leq 6$
$\mathrm{x}_{1}, \mathrm{x}_{2} \geq 0$

12a. A company has plants at P1, P2, and P3 which supply to warehouses at W1, W2, W3 and W4. Weekly factory production capacities of plants, the warehouse capacities to store the products and the cost of transportation are given in the following table: Find the initial allocation by VAM

| Warehouse $\rightarrow$ <br> Plant $\downarrow$ | W1 | W2 | W3 | W4 | Supply |
| :--- | :--- | :--- | :--- | :--- | :--- |
| P1 | 25 | 17 | 25 | 14 | 600 |
| P2 | 15 | 10 | 18 | 24 | 400 |
| P3 | 16 | 20 | 8 | 13 | 600 |
| Requirement | 300 | 300 | 500 | 500 |  |

(or)
12b. Alead draftsman has five drafting tasks and five draftsmen. Each draftsman needs the following number of hours for each task. If each draftsman costs the company Rs. 16 per hour, find the assignment of draftsman to task that will result in minimum total cost.

| Task $\rightarrow$ <br> Draftsman $\downarrow$ | A | B | C | D | E |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 60 | 50 | 100 | 85 | 95 |
| 2 | 65 | 45 | 100 | 75 | 90 |
| 3 | 70 | 60 | 110 | 97 | 85 |
| 4 | 70 | 55 | 105 | 90 | 93 |
| 5 | 60 | 40 | 120 | 85 | 97 |

13a. Define the terms: (a) Laplace criterion (b) Hurwicz criterion
A retailer purchases newspaper everyday and sells on the same day. Any unsold item will be a loss for him. The daily demand for newspaper is in the range of $15,16,17$, and 18 with respective probabilities $0.1,0.2,0.4$, and 0.3 . How many papers should the retailer order to maximize the profit? The payoff matrix is given below.

| Action $\rightarrow$ <br> Event $\downarrow$ | Probability | 15 | 16 | 17 | 18 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 15 | 0.1 | 225 | 200 | 175 | 150 |
| 16 | 0.2 | 225 | 240 | 215 | 190 |
| 17 | 0.4 | 225 | 240 | 255 | 230 |
| 18 | 0.3 | 225 | 240 | 255 | 270 |

(or)
13b. Solve the game whose payoff matrix is given below:

| Player B $\rightarrow$ <br> Player $\downarrow$ | B1 | B2 | B3 | B4 |
| :--- | :--- | :--- | :--- | :--- |
| A1 | 2 | -2 | 4 | 1 |
| A2 | 6 | 1 | 12 | 3 |
| A3 | -3 | 2 | 0 | 6 |
| A4 | 2 | -3 | 7 | 1 |

14a. Given the following information:

| Activity | A | B | C | D | E | F | G | H | I | J |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Predecessor | - | - | - | A | B | C | D | C | H | G,E,F |
| Duration(Days) | 3 | 2 | 4 | 6 | 5 | 8 | 10 | 6 | 18 | 15 |

i. Drawnetwork diagram and determine the critical path.
ii. For each activity, find earliest start and finish, latest start and finish, total float, free float and independent float
(or).

14b. A proiect consists of 7 activities. The time estimate are in davs.

| Activity | A | B | C | D | E | F | G |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Predecessor | --- | A | A | C | B | D,E | F |
| $\mathrm{T}_{\mathrm{O}}$ | 1 | 2 | 3 | 4 | 3 | 2 | 5 |
| $\mathrm{~T}_{\mathrm{M}}$ | 4 | 5 | 3 | 10 | 6 | 5 | 11 |
| $\mathrm{~T}_{\mathrm{P}}$ | 7 | 14 | 3 | 22 | 15 | 14 | 14 |

i. Draw the PERT network diagram and find the critical path.
ii. Find the expected length of the critical path and its variance.

15a. A television repairman finds that the time spent on his jobs has an exponential cibution with a mean of 30 minutes. If he repairs sets in the first cum first order
and if the arrival of sets follows a Poisson distribution with an average rate of 10 per
8 -hqur day. What is the repairman's expected idle time each day? How many jobs are waiting in the shop? Also find average waiting time of each job in the queue and in the shop.
(or)
15b Cars arrive at a petrol pump with exponential inter-arrival times having mean $1 / 2$ minute. The attendant takes an average of $1 / 5$ minute per car to supply petrol, the service time being exponentially distributed.
Determine
i. the average number of cars waiting to be served.
ii. the average number of cars in the queue and
iii. the proportion of time for which the pump attendant is idle.

PARTC
Answer any TWOQuestions
$(2 \times 20=40$ Marks $)$ 16a. Solve the
following linear programming problem

$$
\begin{array}{cl}
\text { Minimize } Z=3 x_{1}-2 x_{2}-x_{3} \\
\text { Subject to } & -\mathrm{x}_{1}+2 \mathrm{x}_{2}+3 \mathrm{x}_{3} \leq 7 \\
& 4 \mathrm{x}_{1}-2 \mathrm{x}_{3} \leq 12 \\
& 3 \mathrm{x}_{1}+8 \mathrm{x}_{2}+4 \mathrm{x}_{3} \leq 10 \\
& \mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3} \geq 0 \tag{12marks}
\end{array}
$$

16b. Give the steps of MODI method for final allocation in Transportation Problem. (8 marks)
17a. For a transportation problem, unit transportation cost, demand and supply are as given below.which is given below
(12 marks)

| Source $\rightarrow$ <br> Destination $\downarrow$ | $\mathrm{D}_{1}$ | $\mathrm{D}_{2}$ | $\mathrm{D}_{3}$ | $\mathrm{D}_{4}$ | Supply |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{S}_{1}$ | 6 | 1 | 9 | 3 | 70 |
| $\mathrm{~S}_{2}$ | 11 | 5 | 2 | 8 | 55 |
| $\mathrm{~S}_{3}$ | 10 | 12 | 4 | 7 | 70 |
| Demand | 85 | 35 | 50 | 45 |  |

i. Find initial allocation by least cost method and VAM ii. Obtain the min. transportation cost 17b. Describe Hungarian method of solving an Assignment Problem.
(8marks)
18a. What are the characteristics of queuing system?
(8 marks)
18b. A bank has two Tellers. First Teller handles withdrawals only and the second Teller handles deposits only. It has been found that the service time distribution for the deposits and withdrawals are both exponential distribution with mean 3 minutes per customer. Depositors are found to arrive with a mean arrival rate of 16 per hour and withdrawers arrive at the rate of 14 per hour. What would be the effect on the average waiting time for depositors and withdrawers if each Teller can handle both deposits and withdrawals?
(12 marks)
