M.A. DEGREE EXAMINATION - ECONOMICS

FIRST SEMESTER - APRIL 2016
EC 1809 - MATHS \& STATISTICS FOR ECONOMISTS

Date: 03-05-2016
Dept. No. $\square$

Max. : 100 Marks

Time: 01:00-04:00

## PART A

Answer any FIVE of the following questions:-
[ 5x4=20 marks]

1. Find the inverse of following matrices:
a. $A=\left[\begin{array}{cc}2 & 8 \\ 4 & 10\end{array}\right]$
b. $A=\left[\begin{array}{ll}5 & 3 \\ 2 & 3\end{array}\right]$
2. Define determinant of a Matrix. Write any four properties of determinants.
3. Define the Lagrangian Multiplier Process.
4. Two judges in a beauty competition rank the 12 entries as follows:-

| $\mathrm{X}:-$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Y:- | 12 | 9 | 6 | 10 | 3 | 5 | 4 | 7 | 8 | 2 | 11 |

Calculate rank correlation coefficient between X and Y .
5. The following zero order correlation coefficients are given:
$\mathrm{r}_{12}=0.5 \quad \mathrm{r}_{13}=0.6$ and $\mathrm{r}_{23}=0.7$. Calculate the multiple coefficients of correlation $\mathrm{R}_{1.23}$,
$\mathrm{R}_{2.31}$ and $\mathrm{R}_{3.12}$.
6. A certain type of wooden beam has a mean breaking strength of 1500 kgs and a standard deviation of 100
kgs . Find the relative frequency of all such beams whose breaking strengths lie between 1450 and 1600 kgs.
7. Write the necessary and sufficient conditions for Maxima, Minima and Saddle point.

## PART B

## Answer any FOUR of the following questions:-

[4X10=40 marks]
8. Discuss the application of Partial Derivatives in Economics.
9. Solve the following equations using Cramer's rule:
a) $2 x_{1}+3 x_{2}-x_{3}=15$.
$4 x_{2}+2 x_{3}=16$.
$3 x_{1}+2 x_{2}=18$.
10. A Monopolist has the following total revenue and total cost functions,
$\mathrm{R}=30 \mathrm{Q}-\mathrm{Q}^{2}$ and $\mathrm{C}=\mathrm{Q}^{3}-15 \mathrm{Q}^{2}+10 \mathrm{Q}+100$.
Find (a) profit maximizing output.
(b) maximum profit.
(c) equilibrium price.
11. Given below are the figures of production (in Lakh Kg ) of a sugar factory:

| Year | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Production | 40 | 45 | 46 | 42 | 47 | 50 | 46 |

Fit a Linear Trend line by the Least Square method and tabulate the trend values.
12. Find Maxima and Minima (if any) of the function $y=5 x_{1} x_{2}$ subject to $x_{1}+2 x_{2}=8$.
13. Determine Karl Pearson's coefficient of correlation from the data given below:

| Marks | Age in Years |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $16-23$ | $23-30$ | $30-37$ | $37-44$ | $44-51$ |
| $18-25$ | 9 | 3 | - | - | - |
| $25-32$ | - | 20 | 10 | 4 | - |
| $32-39$ | - | - | 12 | 5 | 3 |
| $39-46$ | - | - | 8 | 7 | 3 |
| $46-53$ | - | - | - | 10 | 4 |

14. Examine the concept of ANOVA using a suitable illustration.

## PART C

Answer any TWO of the following question:-
15. A consumer has a Utility function given by $\mathrm{U}=5 \log \mathrm{X}_{1}+2 \log \mathrm{X}_{2}$. If the budget constraint is given by $4 \mathrm{X}_{1}+2 \mathrm{X}_{2}=28$, find out the optimum quantities of the two goods that the consumer should purchase in order to maximize utility, subject to the budget constraint.
16. Solve the following Input-Output model using Leontief inverse and find the gross output of the economy:

$$
\mathrm{A}=\left[\begin{array}{ccc}
0.3 & 0.2 & 0.3 \\
0.1 & 0.3 & 0.4 \\
0.2 & 0.3 & 0
\end{array}\right] \quad \mathrm{F}=\left[\begin{array}{c}
500 \\
700 \\
600
\end{array}\right]
$$

17. A. Examine the significance of Chi square distribution.
B. In an Industry, 200 workers, employed for a specific job, were classified according to their performance and training received / not received to test independence of a specific training and performance. The data is summarized as follows:

|  | PERFORMANCE |  | Total |
| :---: | :---: | :---: | :---: |
|  | GOOD | NOT GOOD |  |
| TRAINED | 100 | 50 | 150 |
| UNTRAINED | 20 | 30 | 50 |
|  | 120 | 80 | 200 |

Use $\chi^{2}$ test of independence at $5 \%$ level of significance and write your conclusion.
(Table value of $\chi^{2}$ at $1 \mathrm{~d}: \mathrm{f} ; 5 \%=3.84$ )
18. The heights of a sample of 10 fathers and their eldest sons are given below (to the nearest cm ):

Height of Father: $\begin{array}{llllllllll}70 & 167 & 162 & 163 & 167 & 166 & 169 & 171 & 164 & 165\end{array}$ (X)

Height of Son: $\begin{array}{lllllllllll}168 & 167 & 166 & 166 & 168 & 165 & 168 & 170 & 165 & 168\end{array}$
(Y)
a) Find the regression lines of ' $Y$ on $X$ ' and of ' $X$ on $Y$ '.
b) Find the two regression coefficients.
c) Calculate the correlation coefficient.
[Hint: Let $\mathrm{A}=165$ and $\mathrm{B}=165$ be the assumed mean for the two series respectively]
