LOYOLA COLLEGE (AUTONOMOUS), CHENNAI - 600 034

M.Sc. DEGREE EXAMINATION - PHYSICS

FIRSTSEMESTER - APRIL 2017

16PPH1MC01/ PH 1817 - CLASSICAL MECHANICS

Date: 02-05-2017 09:00-12:00 Dept. No.

Max.: 100 Marks

Answer ALL questions

(10X2 = 20 marks)

1. Find out whether the given force $F = (y^2z^3 - 6xz^2)\hat{\imath} + 2xyz^3\hat{\jmath} + (3xy^2z^2 - 6x^2z)\hat{k}$ is conservative or not.

PART A

- 2. What is differential scattering cross section?
- 3. What is a body coordinate system?
- 4. Determine $[p_x, J_z]$
- 5. Prove that the generating function $F = \sum q_i P_i$ generates an identity transformation.
- 6. Show that Poisson bracket has antisymmetry property.
- 7. Establish the relation between Hamilton's principal function and Hamilton's characteristic function.
- 8. For the Lagrangian $=\frac{m}{2}(\dot{r}^2 + r^2\dot{\theta}^2) \frac{V}{r}$. Determine the generalized momenta.
- 9. What are action angle variables?
- 10. What are coupled oscillators?

PART B Answer any FOUR questions (4 x 7.5 = 30 marks)

- 11. Using Lagrange's equation of motion determine the time period of oscillation of a simple pendulum.
- 12. Obtain the Lagranges's equation of motion from variational principle.
- 13. Derive an expression for the rotational kinetic energy of a rigid body.
- 14. Explain how action angle variables are used to obtain the frequencies of periodic motion.
- 15. Prove the invariance of Poisson bracket in canonical transformation.
- 16. Prove the conservation of linear momentum and angular momentum for a system of particles.

PART C

Answer any FOUR questions $(4 \times 12.5 = 50 \text{ marks})$

- 17. Derive the Lagrangian for a charged particle moving in an electromagnetic field. Hence deduce the Lagrange's equation of motion for a non conservative system.
- 18. Discuss how a two body problem is reduced to a one body problem. What is meant by equations of motion and first integrals? Show that the areal velocity is a constant.
- 19. Prove by Hamilton Jacobi theory that the orbit of a planet around the sun is an ellipse.
- 20. Define canonical transformation and obtain the transformation equations corresponding to F1 and F2 generating functions.

1

- 21. Applying the theory of small oscillations, determine the eigenvalues and eigenvectors for a linear triatomic molecule. Discuss the different modes of vibrations of the molecule.
- 22. a) Show that the shortest distance between two points in a plane is a straight line.
 - b) If $[\emptyset, \rho]$ be the poisson bracket, then prove that $\frac{\partial [\emptyset, \rho]}{\partial t} = \left[\frac{\partial \emptyset}{\partial t}, \rho\right] + \left[\emptyset, \frac{\partial \rho}{\partial t}\right]$
