# LOYOLA COLLEGE (AUTONOMOUS), CHENNAI - 600034 

## M.Sc. DEGREE EXAMINATION - STATISTICS

THIRD SEMESTER - APRIL 2013

## ST 3814-STATISTICAL COMPUTING - II

Date: 07/05/2013
Dept. No. Max. : 100 Marks
Time : 1:00-4:00

## Answer any THREE questions

All carry equal marks

1. Let $\mathrm{X} \sim B(1, \theta) ; \theta=.1, .2, .3$ and $\mathrm{H}:: \theta=.2$ vs $K: \theta=.1, .3$. Examine whether UMP level .05 test exist. Otherwise find UMPU.
2. Mr. Senthil who studied I group in plus two has scored $75 \%$ in Mathematics. There were five sections in I group of Plus two in that particular school. The number of students who have scored more than $75 \%$ in mathematics in each of the five sections of I group of Plus two in that school are displayed below.

| Section | No. Of Students |
| :---: | :---: |
| 1 | 30 |
| 2 | 15 |
| 3 | 20 |
| 4 | 25 |
| 5 | 10 |

Using the following probability sampling design,

$$
P(s)=\left\{\begin{array}{l}
0.20 \text { for } s=\{2,4,5\} \\
0.15 \text { for } s=\{3,4,2\} \\
0.25 \text { for } s=\{1,4,5\} \\
0.10 \text { for } s=\{2,5\} \\
0.25 \text { for } s=\{1,3,5\} \\
0.05 \text { for } s=\{1,2,3\}
\end{array}\right.
$$

estimate the number of students who have scored more than Mr. Senthil assuming the set $\{1,3,5\}$ is the sampled set. Find the true variance of the estimate and also find the estimated variance of the estimate.
3. Suppose that the probability of a hot day (state 0 ) following a cool day(state 1 )is $1 / 3$ and that of a cool day following hot day is $1 / 2$. Find
(i). The probability that may $3^{\text {rd }}$ is a hot day given that may $1^{\text {st }}$ is a hot day.
(ii) The probability that may $3^{\text {rd }}$ is a hot day given that may $1^{\text {st }}$ is a cool day.
(iii) The probability that may $5^{\text {th }}$ is a hot day given that may $1^{\text {st }}$ is a cool day.
(iv) The probability that $5^{\text {th }}$ may is a hot day given that may $1^{\text {st }}$ is a hot day.
4. Perspiration from 20 healthy females were analyzed. Three components $X_{1}=$ Sweat rate ,
$\mathrm{X}_{2}=$ Sodium content and $\mathrm{X}_{3}=$ Potassium content were measured and the results are given Below:

| Individual | X1 | X2 | X3 |
| :---: | :---: | :---: | :---: |
| 1 | 4 | 48.8 | 9.6 |
| 2 | 6 | 65.4 | 8.3 |
| 3 | 4.1 | 47.5 | 11.2 |
| 4 | 3.5 | 53.5 | 12.3 |
| 5 | 3.4 | 55.8 | 10 |
| 6 | 4.9 | 37.3 | 8.2 |
| 7 | 2.7 | 25.1 | 14.3 |
| 8 | 7.5 | 33.4 | 7.9 |
| 9 | 7 | 47.7 | 8.8 |
| 10 | 5.7 | 54.4 | 11.6 |
| 11 | 4.2 | 37.2 | 13 |
| 12 | 4.8 | 59.1 | 12.6 |
| 13 | 3.8 | 28.1 | 10.1 |
| 14 | 4.8 | 40.5 | 8.7 |
| 15 | 1.8 | 13.8 | 10.4 |
| 16 | 8.8 | 56.7 | 7.4 |
| 17 | 4.8 | 71.9 | 8.5 |
| 18 | 6.8 | 53.1 | 11.2 |
| 19 | 4.4 | 44.4 | 11.5 |
| 20 | 5.8 | 41.2 | 9.7 |

Test the hypothesis $\mathrm{H}_{0}: \mu^{\prime}=[7,51,11]$ against $\mathrm{H}_{1}: \mu^{\prime} \neq[7,51,11]$ at $1 \%$ level of significance.
5. a).A sample of 40 students is to drawn from a population of two hundred students belonging to A\&B regions. The mean \& standard deviation of their heights(in Inches) are given below.

| Region | Total no. of people | Mean | S.D |
| :---: | :---: | :---: | :---: |
| A | 150 | 43.3 | 2.4 |
| B | 50 | 52.1 | 3.2 |

i) Derive a sample for each region using proportional allocation.
ii) By using Neyman Allocation, Obtain the variance of the estimate of the population mean. ( 16 M )
b. From the following informations, Compare the precision of Systematic sampling, Simple random sampling and Stratified sampling.

| Systematic Sampling Number |  |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  |  |  |  |  |  |  |  |
| Strata | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ |
| I | 33 | 34 | 35 | 33 | 32 | 40 | 28 | 40 |
| II | 17 | 20 | 21 | 17 | 16 | 24 | 15 | 26 |
| III | 3 | 6 | 7 | 4 | 3 | 8 | 2 | 10 |
| IV | 8 | 11 | 12 | 9 | 7 | 16 | 5 | 15 |
