LOYOLA COLLEGE (AUTONOMOUS), CHENNAI – 600 034

B.Sc. DEGREE EXAMINATION – **STATISTICS**

FIFTH SEMESTER – **APRIL 2014**

ST 5404 - ACTUARIAL STATISTICS

Date : 09/04/2014   Dept. No.   Max. : 100 Marks
Time : 01:00-04:00

Section A

Answer all questions.   (10x2=20)

1. Define interest

2. Define accumulated value.

3. Define present value.

4. Differentiate between uniform and variable annuity.

5. What do you mean by perpetuity?

6. Define effective rate of interest.

7. Differentiate between annuity certain and annuity due.

8. What is deferred annuity?

9. What is the use of mortality table?

10. What is a stationary population?

Section B

Answer any FIVE questions.   (5x8=40)

11. (i) Define discount and derive an expression for discount.

    (ii) A person is entitled to Rs. 2000 after 3 years, another Rs. 2500 after a further period of 3 years and Rs. 5000 after 4 years. Find the present value of the payments if the rates of interest assumed are, 5% for the first 4 years, 6% for the next four years and 7% for the next 4 years.

12. Differentiate between effective and nominal rate of interest and derive the expressions for effective rate corresponding to nominal rate and vice-versa.

13. In lieu of a single payment of Rs. 1000 at the present moment a person agrees to receive three equal payments at the end of 3 years, 6 years and 10 years respectively. Assuming a rate of interest of 6% p.a., what should be the value of each of the three payments?

14. A man wishes that Rs. 2,50,000/- be paid to his daughter after 10 years. A bank agrees to pay this for a lump sum invested now. If the rate of interest is 10% p.a. for first 3 years, 7.5% p.a. for second 3 years and 6.26% p.a. for the last 4 years, find the lump sum to be invested by the man.

15. A loan of Rs. 1000 is to be repaid by payments of Rs 200 at the end of one year, Rs. 300 at the end of 2 years and the outstanding balance at the end of 4 years. What should the final payment be in interest is reckoned at 9% p.a. convertible half yearly.

16. A series of 8 annual sums of money is payable, the first payment taking place at the end of one year from now. The first 5 payments are Rs. 3000 each and the last 3 payments are Rs. 2000 each. Find the present value and the accumulated value of the 8 payments at 8% p.a.

17. Fill up the blanks in the following portion of a life table:

Age x	I_x	d_x	q_x	p_x
10	1000000		0.00409	
11			0.00370	
12				0.99653
13				0.99658
14			0.00342	

18. What is the object of constructing a mortality table? Give the general procedure and stages involved in the construction of mortality table.

Section C

Answer any TWO questions. (2x20=40)

19. (a) Explain in detail the classification of annuities.

   (b) Explain deferred annuities and derive expressions for present value and accumulated value of deferred annuities. (12 + 8)

20. (a) Show that $(1+i)^t\, a_n = v^{n-t}\, s_n = s_t + a_{n-t}$.

   (b) Derive the expressions for present value and accumulated value of immediate increasing annuity. (10 + 10)

21. (a) A loan of Rs. 10,000/- is to be repaid with interest at 6% p.a. by means of an immediate annuity for 5 years. Find the level payment. What will be the principal and interest contained in each of the 5 installments?

   (b) Derive expressions of present value of immediate perpetuity, perpetuity due, deferred immediate perpetuity and deferred perpetuity due. (10 + 10)

22. (a) Find the probabilities that,

   (i)   a life aged 35 will die between the ages 45 and 50.

   (ii) a life aged 35 will not die between the ages 45 and 50.

   (iii) a life aged 35 will die in the 10th year from now.

   (iv) a life aged 35 will not die in the 10th year from now.

   (b) Explain in detail the probabilities of survival and death. (8 + 12)

****
