LOYOLA COLLEGE (AUTONOMOUS) CHENNAI – 600 034

B.Sc. DEGREE EXAMINATION – **STATISTICS**

SIXTH SEMESTER - APRIL 2025

UST 6503 - STATISTICAL QUALITY CONTROL

	te: 30-04-2025 Dept. No.	Max. : 100 Marks
Tin	ne: 09:00 AM - 12:00 PM	
SECTION A - K1 (CO1)		
	Answer ALL the Questions - $(10 \times 1 = 10)$	
1.	Answer the following	
a)	What is the main objective of Six Sigma?	
b)	Define the purpose of a Histogram in quality analysis.	
c)	State the primary objective of Statistical Process Control (SPC).	
d)	Define Quality Assurance.	
e)	Explain continuous sampling plan.	
2.	Fill in the blanks	
a)	Total Quality Management (TQM) focuses on continuous im	provement.
b)	A Frequency Distribution organizes data into and records how often values occur.	
c)	The p-chart is used to track the of defective items in a sample.	
d)	is a statistical measure used to determine the ability of a process to produce products within	
	specified limits.	
e)	In a, a sample of size 'n' is taken, and the lot is accepte	d if the number of defective items
	does not exceed the acceptance number.	
	SECTION A - K2 (CO1)	
	Answer ALL the Questions	$(10 \times 1 = 10)$
3.	True or False	
٠.		
a)	Statistical methods are not essential for quality improvement.	
	The QQ Plot helps in identifying normality in a dataset.	
a) b) c)	The QQ Plot helps in identifying normality in a dataset. The u-chart is used when the sample size varies.

Discuss the construction of p-chart and u-chart with an example each. 7. Discuss Process Capability Analysis and its Importance in Quality Control. 8. SECTION C - K4 (CO3) Answer any TWO of the following $(2 \times 10 = 20)$ What is Total Quality Management (TQM)? Examine its key principles and benefits in an organization. What is a Frequency Distribution? Examine how does it help in analyzing process quality? 10. Explain any five key dimensions of quality introduced by Garvin. Provide relevant example for each 11. dimension. 12. Explain the Acceptance Sampling Plan and Its Importance in Quality Control. SECTION D - K5 (CO4) Answer any ONE of the following $(1 \times 20 = 20)$ (a) Evaluate the philosophy and basic concepts of Quality Improvement in the modern business (b) Asses the concept of a Quantile-Quantile (QQ) Plot and its applications in process quality. A manufacturing company produces metal rods, and quality control personnel measure the diameter (in 14. mm) of rods over 10 batches. The data collected is given below. Construct \bar{X} and R chart. (10)(b) Explain about the Average Total Inspection (ATI) and Double Sampling Plan. (10)(a) Discuss the Single Sampling Plan for Attributes with an Example in detail. (10)16. (b) Explain Consumer's and producers' risks with an example for each. (10)
