## LOYOLA COLLEGE (AUTONOMOUS), CHENNAI - 600034

## B.Sc. DEGREE EXAMINATION - STATISTICS <br> FIFTH SEMESTER - NOVEMBER 2009 <br> ST 5503-COMPUTATIONAL STATISTICS

Date \& Time: 10/11/2009 / 9:00-12:00
Dept. No.
Max. : 100 Marks

Answer ALL the Questions. Each question carries $\mathbf{2 0}$ marks.

1. a). A population consists of five numbers $2,3,6,8$ and 11 . Consider all possible samples of size two which can be drawn with replacement from this population. Calculate the standard error of sample mean. Also calculate the standard error of sample mean when the samples of size two are drawn without replacement.

## (OR)

b). A survey of 200 families with 4 each revealed the following distribution.

| No.of boys | $:$ | 0 | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No.of families | $:$ | 8 | 48 | 76 | 54 | 14 |

Assume that X has binomial distribution with parameter (4, p), where p is the probability of a child being a boy. Obtain the maximum likelihood estimate (MLE) of p and the MLE of the probability that a randomly selected family has at least 3 boys.
c ). An absolute sample of 11 mathematical scores are assumed to be $N\left(\mu, \sigma^{2}\right)$. The observations are $26,31,27,28,29,28,20,29,24,31,23$.Find a $95 \%$ confidence interval of $\sigma$.
2. a). Consider the following data:

| $\mathrm{X}_{1}:$ | 25 | 30 | 45 | 52 | 65 | 75 | 80 | 42 | 50 | 60 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{X}_{2}:$ | 60 | 40 | 35 | 50 | 60 | 72 | 63 | 40 | 55 | 62 |

Test whether the two population variances are equal. Use $5 \%$ significance level.
b). Below is the distribution of hair colours for either sex in a University.

Hair colour

|  | Fair | Red | Medium | Dark | Jet <br> black |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Boys | 592 | 119 | 849 | 504 | 36 |
| Girls | 544 | 97 | 677 | 451 | 14 |

Test the homogeneity of hair colour for either sex. Use $5 \%$ significance level. (OR)
c). In a sample of 1650 men from a large city, 400 are found to be drinkers. In another city 500 out of 1900 are found to be drinkers. Test whether the cities are significantly different with respect to drinking habit.
d). A time study engineer develops new sequence of operation elements. He hopes that it will reduce the mean cycle time of a certain production process. The result of a time study of 20 cycles is given below.

| 12.25 | 11.97 | 12.15 | 12.08 | 12.31 | 12.28 | 11.94 | 11.84 | 12.16 | 12.04 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 12.09 | 12.15 | 12.14 | 12.47 | 11.98 | 12.04 | 12.11 | 12.25 | 12.15 | 12.34 |

The present mean cycle is 12.5 minutes. Test whether the engineer adopts the new sequence of operation element.
3. a). The following are the weight gains (in pounds) of two random samples of young Indians fed on two different diets but otherwise kept under identical conditions:

| Diet I: | 16.3 | 10.1 | 10.7 | 13.5 | 14.9 | 11.8 | 14.3 | 10.2 | 12.0 | 14.7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 23.6 | 15.1 | 14.5 | 18.4 | 13.2 | 14.0 |  |  |  |  |
| Diet II: | 21.3 | 23.8 | 15.4 | 19.6 | 12.0 | 13.9 | 18.8 | 19.2 | 15.3 | 20.1 |
|  | 14.8 | 18.9 | 20.7 | 21.1 | 15.8 | 16.2 |  |  |  |  |

Use Wilcoxon test at 0.01 level of significance to test the null hypothesis that the two population samples are identical. .

## (OR)

b). A vendor of milk products produces and sells low fat dry milk to a company that uses it to produce baby formula. In order to determine the fat content of the milk, both the company and the vendor take a sample from each lot and test it for fat content in percent. Ten sets of paired test results are

| Lot number | Company Test <br> Results (X) | Vendor Test Results <br> (Y) |
| :---: | :---: | :---: |
| 1 | 0.50 | 0.79 |
| 2 | 0.58 | 0.71 |
| 3 | 0.90 | 0.82 |
| 4 | 1.17 | 0.82 |
| 5 | 1.14 | 0.73 |
| 6 | 1.25 | 0.77 |
| 7 | 0.75 | 0.72 |
| 8 | 1.22 | 0.79 |
| 9 | 0.74 | 0.72 |
| 10 | 0.80 | 0.91 |

Let $\mathrm{D}=\mathrm{X}-\mathrm{Y}$ and let $\mathrm{m}_{\mathrm{D}}$ denote the median of the differences.
Test $H_{0}: \mathrm{m}_{\mathrm{D}}=0$ against $\mathrm{H}_{1}: \mathrm{m}_{\mathrm{D}}>0$ using the sign test. Let $\alpha=0.05$ approximately.
4. a). Fit a straight line by the method of least squares for the following data and also forecast the earnings for the year 2010.

| Year | $:$ | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 |
| :--- | :---: | ---: | ---: | ---: | :---: | ---: | :--- | :--- |
| Earnings (Lakhs) | $:$ | 15 | 14 | 18 | 20 | 17 | 24 | 27 |

b). Calculate five yearly moving averages of number of students studying in a college from the following data.
Year : $199619971998199920002001200220032004 \quad 2005$
No.of students. : 332
$(10+10)$
(OR)
c). Calculate the seasonal indices for the data given below by the link relative method.

| Quarter | Years |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2004 | 2005 | 2006 | 2007 | 2008 |
| I | 45 | 48 | 49 | 52 | 60 |
| II | 54 | 56 | 63 | 65 | 70 |
| III | 72 | 63 | 70 | 75 | 84 |
| IV | 60 | 56 | 65 | 72 | 66 |

5. a). From the following data calculate the seasonal indices by the ratio to moving average method.

| Year | $1^{\text {st }}$ Quarter | $2^{\text {nd }}$ Quarter | $3^{\text {rd }}$ Quarter | $4^{\text {th }}$ Quarter |
| :---: | :---: | :---: | :---: | :---: |
| 2004 | 68 | 65 | 61 | 63 |
| 2005 | 65 | 58 | 56 | 61 |
| 2006 | 68 | 63 | 63 | 67 |
| 2007 | 70 | 59 | 56 | 62 |
| 2008 | 60 | 55 | 51 | 58 |

(OR)
b). For the following data calculate the Laspeyre's, Paasche's, Fisher's and Kelly's price index numbers for 2005.

|  | 2000 |  | 2005 |  |
| :---: | :---: | :---: | :---: | :---: |
| Item | Price (in Rs.) | Quantity | Price (in Rs.) | Quantity |
| A | 15 | 15 | 22 | 12 |
| B | 20 | 5 | 27 | 4 |
| C | 4 | 10 | 7 | 5 |
